DESCRIPTION OF PROPOSED WORKS

A well.

DEVELOPMENT SCHEDULE				
BEGIN PROJECT BY THIS DATE:	COMPLETE PROJECT BY THIS DATE:	WATER PUT TO FULL USE BY THIS DATE:		
Begun	June 1, 1993	June 1, 1994		

PROVISIONS

Installation and maintenance of an access port as described in Ground Water Bulletin No. 1 is required. An air line and gage may be installed in addition to the access port.

All water wells constructed within the state shall meet the minimum standards for construction and maintenance as provided under RCW 18.104 (Washington Water Well Construction Act of 1971) and Chapter 173-160 WAC (Minimum Standards for Construction and Maintenance of Water Wells).

Withdrawal of water under this right may be limited or otherwise regulated in favor of senior rights.

That portion of this authorization relating to irrigation is classified as a FAMILY FARM PERMIT in accordance with Chapter 90.66 RCW (Initiative Measure No. 59). This means the land being irrigated under this authorization shall comply with the following definition: Family Farm - a geographic area including not more than 2,000 acres of irrigated agricultural lands, whether contiguous or noncontiguous, the controlling interest in which is held by a person having a controlling interest in no more than 2,000 acres of irrigated agricultural lands in the State of Washington which are irrigated under water rights acquired after December 8, 1977. Furthermore, the land being irrigated under this authorization must continue to conform to the definition of a family farm.

Well #2 must be abandoned to meet state regulations prior to any water withdrawn under authority of Permit No. G4-30137 being considered beneficially used. The work must be reported to the department in accordance with the requirements of WAC 173-160-050.

Water for irrigation withdrawn under the authority of this permit will be considered a primary water supply unless and until the Yakima County Superior Court determines a surface water right is appurtenant to the authorized place of use. If a surface water right is authorized, water for irrigation withdrawn under this authority shall be considered a supplemental supply, with the water made available under primary rights by said surface water right, hence the only water for irrigation therein permitted for withdrawal would be that required to compensate for any deficit in the surface water supply. This amount shall not exceed 18 acre-feet per year less any water applied to these lands under existing rights.

This permit shall be subject to cancellation should the permittee fail to comply with the above development schedule and/or fail to give notice to the Department of Ecology on forms provided by that Department documenting such compliance.

Given under my hand and the seal of this office at Yakima, Washington,

this 21st day of August 1992.

Department of Ecology
